

METCO TOOLS AND EQUIPMENT

Metco Batch Mixer

Metco Batch Mixer is a portable, electric mixer of all steel construction for mixing Metalcrete epoxies, urethanes, toppings, overlays, mortars and grouts. It utilizes a standard 5-gal. (18.9 liter) pail. Pail and paddle are removable. Mixing action extrudes, shears, blends as the pail rotates. Four mixing angles are available to mix a coarse mortar or a thin slurry.

- Max. fluid capacity: 5 gals. (18.9 liter).
- Max. cement capacity: 70 lbs. (31.8 Kg).
- Max. fluid mix: 4 gals. (15.1 liter).
- Mixing speed: 60 R.P.M.
- Shipping wt., with motor: 40 lbs. (18.1 Kg).
- Construction: All Steel.
- Packed in steel pail which becomes mixing drum. (Drum may be replaced by any standard 5-gal. (18.9 liter) metal pail.)
- Bearings: Oil impregnated bronze sealed to keep out dust and dirt.
- Motor: 1/3 H.P., 100 volt, 1725 R.P.M.
- Complete assembly and operating instructions supplied with shipment.

Metco Jiffy Mixer

Metco Jiffy Mixer is a stainless steel mixing blade for thorough and effective blending of liquid components, grouts, mortars, and aggregate blends. The unique design eliminates splashing and prevents drawing in air. Two impellers at the top and bottom force material in opposite directions. The impellers confine the main mixing action within the mixer while the horizontal opposed impellers force material from the lower and upper areas of the container into the mixer. The leading edge of the lower impeller can scrape the bottom of the container, bringing all settled particles into the mixing. The ring prevents the puncturing of the container wall. The 1/4 inch (6.35 mm) shaft attaches to any drill.

Diamite/Lexite Spreader Tool

The spreader tool is used to uniformly spread and distribute Diamite and Lexite coating and topping systems. A rubber squeegee is also available with the spreader. Total width is 18 inches (45.7 cm).

Metco Foam Rubber Roller

The Metco Foam Rubber Roller is recommended for use with Diamite and Lexite coating and topping systems. This roller helps leave a smooth and blemish-free surface. The width is 9 inches (22.9 cm), permitting use on a regular paint roller handle.

Metco Serrated Trowel

The Metco Serrated Trowel is made of steel and is recommended for applying Positread Skidproofing. One edge is notched to uniformly distribute and spread the material.

Availability

Metco Tools and Equipment are normally available immediately from your local distributor or they will be shipped within 5 working days upon receipt of order. Please contact your local Metalcrete representative or call Metalcrete directly for more information.
